sera at the Hannover Messe 2010

Under the motto "**Hydrogen Drives the Future**", **sera** exhibited for the first time and with great success at the largest industrial trade fair in the world, the Hannover Messe, in the period of 19 -23 April 2010.

On the joint stand of the H2BZ Hydrogen + Fuel Cell Initiative of the federal state of Hessen, **sera** presented the development of a two-stage compressor system for a hydrogen filling station. Forklifts powered by fuel cells are refuelled here in the Hamburg port. In addition, **sera** is also presenting its comprehensive range of innovative one to three-stage metal diaphragm compressors for the compression of high purity gases in industry and research.

The interested trade visitors, including the Hessen Minister for Environment, Energy, Agriculture and Consumer Protection, Silke Lautenschläger, could also extensively inform themselves on-site about the wide range of products in the field of dosing technology.

Reliable, economic and highly efficient – The two-stage metal diaphragm compressor from **sera** supplies the fuel cell forklifts at the Hamburg port with fresh energy.
